

# MAREX-NA / ARISS

SPACECAM1

Status Report

December 2002

project manager

G. Miles Mann WF1F

# Introduction

The MAREX-NA / ARISS SSTV System is an entry-level PC based Slow Scan Television system designed to be used on board the International Space Station Alpha.

The name of the SSTV project will be called the SpaceCam1 project. This system will support most of the common SSTV transmission modes. The SpaceCam1 project has been specifically designed to be accessible to as many stations as possible around the world. The original proof-of-concept system was built by the MAREX-NA team

and successfully flown on the Russian Space Station Mir (December 1998 until August 1999).

The proof-of-concept system has proven the ability of the hardware design and it has taught us how to make additional improvements for the next generation SSTV system for ISS.

# Project Overview

The basic components of the SpaceCam1 project will consist of a Windows software application, which will run on most Windows computers, and simple VOX/SSTV Interface module.

The SpaceCam1 project will be plug-compatible with the ISS-Ham project and will add two-way SSTV support to the ISS-HAM VHF project.

# Software Status

- The SpaceCam1 Software development is 98% completed.
- Testing with the ARISS audio adapter box has been completed.
- There are no, known problems.

# Software Pending features

- Disk Size Limit
- Bit Map Buttons
  - Requested word translations from ARISS
- Russian fonts for Guest Text
  - Need a loaded computer from RSA

# Hardware Status

- Hardware competed, waiting for final testing and approvals

# ARISS Support

- Need a final decision on computer!
- Need a computer for 2 full months with the correct software load
- Need Button Translations
- Need digital camera information
- Need SSTV band plan
- Need to deliver before ISS Crew #7!

# ARISS Support

- Zvezda Service Module installation plan
- Where are the following items going?
  - ISS-Ham 70cm Radio
  - Laptop computer with SpaceCam1
  - Adapter box and cables
- Power supply connections
- Access to new antenna system

# ISS Crew Training

- Yuri Malenchenko; Expedition commander
- Sergei Moschenko; flight engineer
- Edward Lu; flight engineer
- Expedition Eight Crew
- Michael Foale; Expedition commander
- William McArthur; flight engineer
- Valeri Tokarev; flight engineer

# Flight Time line

- ARISS should make an effort to complete all testing and paper work by Q1 2003
- Attempt to manifest a flight for Q3 2003
- Activate by Q4 2003

# SpaceCam1 features

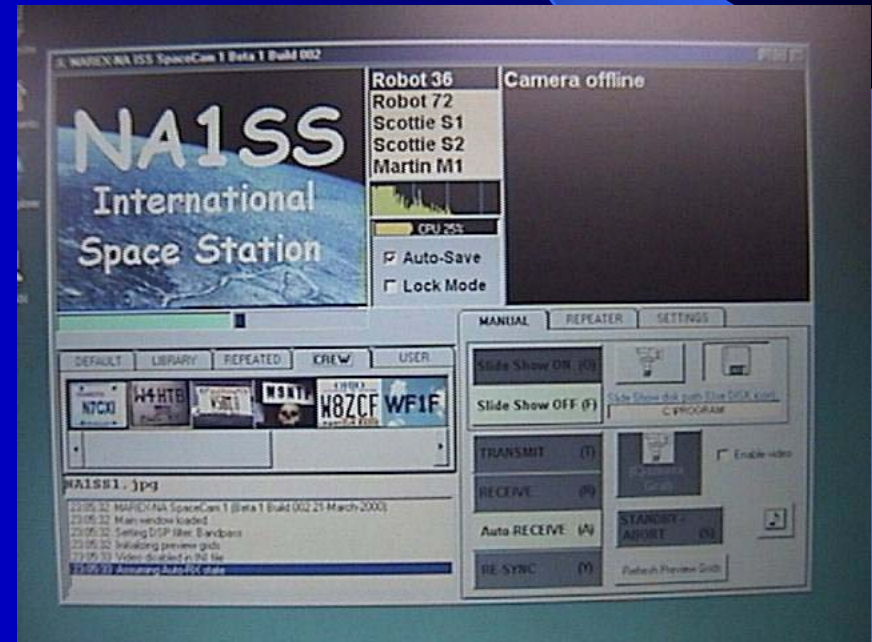

- Slide Show Mode
  - Images from disk or camera will be sent continuously.
- Repeater Mode
  - Earth stations can send an Image to SpaceCam1 and it will repeat the image back to any Earth station within the footprint.

# SpaceCam1 features continued

- Auto Receive
  - SpaceCam1 will automatically receive SSTV images (several formats) and save them to disk.
- Slide Show Mode
  - Crew can select a single image or multiple images to be Repeated over and over again.

# Testing

Farrell Winder and the MAREX team have been actively testing the new software with Lou's new Audio Box.

# Testing Cont.

The image on the left shows the size of the Audio Adapter box required to connect the SSC to the AIRSS Amateur Radio System.

# TESTING SSC

- Final testing in Russia begins Q1 2003
- MAREX purchased 2 IBM-760 PC's to simulate the SSC testing. Everything works.
- New IBM A22 is begin considered
- Extensive successful satellite testing via AO-40

# Space Station Computer

- Existing SSC are IBM 760XD 166Mhz, very limited access due to heavy usage by ISS crew.
- New Taxi computers are being used for existing Ham station on ISS. IBM A22 1.0 GHz Pentium.
- Waiting for approval and testing on new computers.
