

**ARISS Meeting in Montreal  
04 - 06 April 2002**

**ARISS-Europe Hardware Proposal**

# Phase 2 Hardware

**ARISS-Europe supports the concept of a Crossband (VHF/UHF) duplex system with repeater function**

**This concept can be implemented**

- **by amateur built equipment (see DL2MDE project)**
- **by modified commercial equipment**

**If commercial equipment is chosen, ARISS-Europe offers to take in charge the modification of the hardware and the laboratory testing (not the certification)**

**This European contribution, if adopted, has to be presented to the sponsors as a planned project before June 2002**
